

Product Stewardship Policy

The Andrews Group Product Stewardship Statement

The Andrews Group as the supplier of BOLON woven flooring in Australia and New Zealand, are committed to the principles of product stewardship.

The Andrews Group is in a unique position to understand and implement the requirements of appropriate product stewardship. The Andrews Group sister companies include a flooring installation company and a floor maintenance company. The expertise of these operations enables us to coordinate an effective life cycle management strategy for the BOLON product.

The Andrews Group Product Stewardship policy seeks to maximise BOLON woven flooring life cycle environmental performance through specific measures. Core to this are the following actions:

- Supply of high quality flooring product, designed with longevity in mind
- Installation techniques which minimise wastage, and give the best possible conditions for product wearability, and removal at end of life
- Maintenance practices to maximise product appearance and thus extend the product life cycle

The Andrews Group Product Stewardship policy embraces the principle that wherever possible alternatives to sending products to landfill will be implemented.

In accordance with this policy commitment, The Andrews Group specifically offers:

- Acceptance of materials wastage from the installation process for recycling
- Disassembly of BOLON woven flooring products for materials recycling by the approved recycling company for BOLON in Australia, Cryogrind P/L

These commitments are effected through the implementation of a specific product stewardship agreement, which is tailored to suit the requirements of the individual project.

The Andrews Group will continue to refine, improve and expand our Product Stewardship initiatives to provide cost effective life cycle management solutions that are environmentally beneficial and economically sensible.
