

# BOLON

REFERENCE PROJECTS

Using Bolon flooring when creating interiors opens up design possibilities that are both beautiful and functional. With a broad palette of shapes, colors, and expressions, only the imagination sets the limitations. We are very proud of all projects worldwide where our design floorings provide a foundation for great interior experiences. The floorings are used in a wide range of commercial interiors such as offices, hotels, museums, restaurants, healthcare facilities, schools, retail venues, and residential buildings.

In this catalog, you will find a small selection of the projects we love. We hope it will inspire you as much as it inspires us.

# THE ONES THAT CANNOT BE SHOWN

There are many international projects in which we have been trusted to deliver design floorings. Due to secrecy and other reasons, some projects can't be published. Nevertheless, these are projects that we love and put pride in. So, thank you **Reebok** and **Nike** for every step you take. And thank you **Spotify** for making people dance all night long. And we sure haven't forgotten about the information masters at **Google**, walking that extra mile. Or the smart thinkers at **Apple**, always one step ahead. To the **Netflix** crew, we are happy to let you entertain us, keep going. And hey, **Chanel**, you look stunning as always. Thank you all for trusting us.

# NERI & HU

Neri & Hu Design and Research Office is a multifaceted architectural design company located in Shanghai. Founded by the wife-and-husband partners Rosanna Hu and Lyndon Neri in 2004, Neri & Hu provides architectural services as well as product design and interiors. A characteristic of their work is to incorporate the surrounding setting of a location in the design. They create a base for each project on contextual research of the site, its purpose, and the history, converting the input into a project-specific design tool. The location of their own office in Shanghai is not a coincidence. They regard the city as “new global frontier” and describes the city’s context as contemporary chaos. With diverse nationalities and backgrounds, the staff itself underlines the company’s vision:

to respond to a global worldview incorporating overlapping design disciplines for a new paradigm in architecture. ([www.neriandhu.com/en/about](http://www.neriandhu.com/en/about))

At the 2019-edition of the Stockholm Furniture and light fair, Neri & Hu were guests of honor. They created an installation resembling a traditional clan-based Chinese village named: The unfolding Village. The aim of the installation was to bring awareness to the vanishing traditional communities and township culture of China, driven by the rapid urbanization. The visitors of the fair could walk through the “village” exploring the alleys and spaces where Neri & Hu design were on subtle put on display. To complete the pavilion the designers used Bolon flooring as a base for their experience.

In the district of DaAn in Taipei, Taiwan, the 129-roomed Kimpton Da’An hotel is located. The boutique hotel is inspired by the historical and cultural legacy of Taipei. The designers’ vision was to create an interior that resembles the everyday life of the city and at the same time, links the historical and cultural traditions with a new contemporary style. The hotel rooms are both tranquil and inspiring at the same time. A colorful wall is well-balanced with neutral and wooden tones. Completing the space lays a dark Bolon flooring from the collection Bolon by Jean Nouvel, no. 3. The overall impression is both sophisticated and luxurious, with a sense of the city and its rich heritage.

 BOLON STUDIO™ Triangle

Lebuïnuskerk is a church that originates from the Gothic period, built between 1450 and 1525. In the church's latest renovation Van Hoogevest Architecten, an office with a broad knowledge in historic architecture and renovation with among others Rijksmuseum in Amsterdam as a client, choose Bolon Studio Triangles in a customized solution of the collection Create for the floor. A collage surface that captures the light in a stunning way.

13 000 square meters of tiles in a customized solution covers the floor of the advertisement agent Cheil in Seoul. Bolon flooring communicates well with design furniture from all around the world in this creative hub in South Korea.

Architects at MER made the most of this unique Stockholm location by embracing the vast views of the Swedish capital. Lindbäcks Byggs new office, located in Solna just outside the heart of Stockholm has 260 square meters of Bolon By You Stripe, Brown, Sand gloss installed. A Scandinavian mix of wood and white painted walls and ceiling is the cornerstones of this beautiful project. Spots of blue were added to the design to include the company color into this high-rise office interior. The people that visit or works here will experience the change of seasons with only a few millimeters of glass between them and the spectacular urban environment outside.

With its bold geometric shapes and expansive vaulted ceiling, this former post office in northern Sweden presented a unique challenge for Wingårdhs architects. Vetenskapens hus (Swedish for “House of Knowledge”) is a technology and engineering university in Luleå, Sweden. The interior was enhanced with a contemporary design and to compliment the added finishes, 450 square meters of Bolon Studio Triangles in a customized solution of the collection Create – in deep grey tones were chosen for the flooring in this historical restoration project.

ZALANDO

Online fashion leader Zalando, provides convenient shopping experiences to customers across Europe. Offering an assortment of trendy brands as well as its own private label, Zalando's popularity is on the rise. Preferred installers Minga were selected for this office renovation in Berlin, Germany where 200 square meters of Bolon flooring were expertly fitted.

Integrated design company GHD Woodhead was tasked to design an inspirational workspace for Sydney's Road and Maritime Services (RMS) office. In addition to various custom embellishments, 1 000 square meters of Bolon flooring was used to complete the metropolitan space. Flooring from the Artisan collection were used to not only provide a softer finish, but to improve acoustics over the exposed concrete flooring. Geometric patterns accompanied by grey accents were striking and helped to define various areas of the workplace.

# NIDERA

Photo: Richard John Seymour

On the south bank of the River Maas, the superstructure of De Rotterdam rises high above the city. The conspicuous building also referred to as the vertical city, is designed by the celebrated Rem Koolhaas and his company OMA (Office for Metropolitan Architecture). The architecture consists of irregular blocks that are said to be best observed from a moving vehicle. With its 150 meters height, 44 floors, and 160 000 square meters of space, it is the largest building in the Netherlands. Every day approximately 5 000 person uses the building and its wide variety of functions and operations, De Rotterdam contains office spaces, restaurants, cafés, meeting facilities, shops, a hotel, and a fitness area. The structure is both a new landmark of Rotterdam and a city within the city, a vertical one indeed.

On the fifth floor of the lower building, the architects at Fokkema & Partners have created a modern and collaborative friendly office for the commodity trade company Nidera. The interior reflects the characteristics of the construction with its concrete blocks and enormous scale. The biggest challenge for the architects was to create a unified office space around the massive concrete foundations supporting the upper building blocks. The solution was to open up a section of the core connecting both sides and letting the daylight flow through the building. Another notable design aspect was to make the lighting and material choices work together, creating an exciting dynamic. In the center area around the concrete foundation, the interior is made in a mellow golden-yellow tone that reflects the light producing a warm and vibrant contrast to the solid grey concrete.

The floorings play an essential role in visually dividing the office area with colours, patterns, and materials. The designers at Fokkema & Partners used a Bolon flooring collection to enrich the interior design concept. Rolls of a golden yellow customized solution of the collection BKB were used to complete the reflecting expression of the center areas.

For the Stockholm headquarters of Swedish film production and distribution company Svensk Filmindustri (SF), Bitte Granlund of Geco Architects opted for a balanced, refreshing flooring palette featuring triangular Bolon Studio™ tiles in red, blue, orange and grey tones. The circulation of these bright tiles throughout the different meeting and work areas eliminated the hierarchy between public and private spaces within the office. Also, the flooring had the added function of communicating Svensk Filmindustri's commitment to environmental sustainability. Pollutant-free, and easily cleaned with eco-friendly products, the flooring's texture and colours worked well with Svensk Filmindustri's existing furniture, thus eliminating the wasteful need for entirely new interior furnishings.

**“We choose Bolon because of its variety of colours and patterns. We aimed for a flexible environment that had the same character – Bolon helped us to create just that”**

– CHARLOTTA HALLSTRÖM  
White Arkitekter

In the renovation of Karolinska Institutet's Student Centre, Stockholm's medical school's student facility, the architects at White aimed to create a design concept that reflects the purpose and the history of the building – a laboratory student space that is closely connected to chemistry and medicine. Interpreting the concept of chemistry, the architects drew inspiration from lab environments, where materials such as glass, metal, fluorescent lights and Bolon's flooring in the collections of Artisan and Elements created a playful and welcoming environment to the new generation of medical students.

This office design of international restaurant chain Nandos is the result of the collaboration between Stac architecture & I-Am Wow Ltd contractors. Taking the brief to create a space that felt open, Stac designed a 'free standing' box in the middle of the visually appealing office in Manchester, UK.

In addition to reclaimed timber wall panelling, burnt cedar and steel, Bolon flooring was selected to complete the space. 334 square meters of Viva and Osier from the Botanic collection were cleverly installed on the floor in triangular patterns. The vibrant yellow flooring was the perfect contrast to the earthy décor of the trendy office.

BOLON  
STUDIO™  
Triangle

Known as one of Sweden's largest law firms, Advokatbyrå Glimstedt is an office fitted with Bolon flooring at Park49 – a quite new building added to Gothenburg's skyline. Designed by Gothenburg-based practice Wingårdhs, senior architect Helena Toresson and colleague Anna Mitrolios used Bolon Studio™ Triangles and mixed Artisan in Slate and Ivory, with Botanic in Cilia and Picea to create a beautiful pattern across 700 square meters of the office floor.

An intimate, contemporary bank office with a natural feeling was the goal. Bolon helped to fulfil their wish, says Geir Hermansson from Griff Architects. Even if Sparebank 1 is Norway's second biggest bank concern they find their strength in acting on a local level. In their new office in Fredrikstad the interior concept was inspired by the surrounding nature and the archipelago. The collection Artisan from Bolon fitted the concept well due to its textile feel, good durability and acoustics, and the possibility to have a light, Scandinavian colour on the floor.

# WAKEUP

At the ground floor of an old school building in Zeist, the architects from Workshop of Wonders designed an office interior that reflects the identity of the international trade organization Wake Up. The company has a strong relationship with Asia, something that the architects used as a concept-idea for their design. Inspired by the construction of an Asian pavilion, they created a two-tier volume with a consultation room just above the office area. The management room is separated from the office space with an old refurbished vertical sliding wall with frosted windowpanes that gives the space a mysterious and inspiring atmosphere. Over the executive table, the hanging handcrafted oversized brass Helix lamps resemble metal origami, a characteristic feature of designer Marc de Groot. The personality of the space is completed by the large herringbone flooring pattern created of Bolon planks in the colours Ocular, Sense, Visual, Gracious, and Balance from the collection Silence.

When the architects at the Oslo-based Lerche Arkitekter AS were assigned the task of designing the Norwegian Directorate of Health's office in Oslo's city center, they had quite a task ahead of them. Helsedirektoratet's new 7-story office was going to accommodate 600 employees while allowing for an activity-based working style that through an open office organization and universal design plan would accommodate everyone – regardless of eventual disabilities. Architect Birthe Opstad explains that Lerche Arkitekter AS chose a customized solution of the collection Create due to its versatility, as the flooring met the project's demand of accessibility, sound absorption and ability to use different patterns and colours to guide and mark different zones and spaces within the office.

Maaemo is the first restaurant in Norway to hold three Michelin stars. The chef and co-owner, Esben Holmboe Bang, has created a restaurant where the guests can enjoy creatively composed ingredients in a modern and poetic setting. The interior plays on line, shapes, rhythm, and light where the dark woven Bolon Graphic Etch flooring creates a foundation for the design impression. It was important for Holmboe Bang that the spatial experience associates with the overall vision of the restaurant. His ambition is that Maaemo always should deliver a strong sense of place and that everything that the guests interact with adds up to a greater restaurant experience.

The National Museum of Sculpture in Valladolid Spain, houses an impressive collection of art. To complement the natural tones of the mostly white sculptures, architect firm EL Taller de GC selected Bolon flooring. The dark floor in this 16th-century renovated church is a perfect contrast to the space and adds a little drama. Juan Alberto García de Cubas, architect and CEO at EL Taller DE GC explains further –

**“The flooring has a neutral yet friendly presence. It manages to blend two extremes – the cool of the charcoal grey and the warmth of the texture. I love that about it.”**

We couldn't have said it better!

The awarded Chinese architecture studio, Vermilion Zhou Design Group, were assigned the renovation of a Chinese investment company in Beijing. Here, the skilled architects focused the interior design around a calm and sober architectural concept of earthy shades and a minimalistic touch that combines Scandinavian and Asian design. Through pairing a natural interior design concept with Bolon's Now champagne flooring in grey, beige tones – they succeeded in creating a relaxing, high end design feel in the spacious office.

Erik Videgård, a legendary chef within the Scandinavian kitchen opened 2018 Videgård restaurant, a joint project with the concern Stureplansgruppen. Here, a great dining experience is complemented with warm, tactile Bolon Artisan Quartz flooring in an expression of pale pink. A perfect choice for a large restaurant environment where flooring needs to withstand high foot traffic.

Since its opening in 2010, over three million visitors have been walking over the Bolon floorings at Fotografiska in Stockholm. And the main reason for choosing Bolon for the 2 500 square meters of exhibition spaces was its advantageous durability properties. The founder, Jan Broman, needed a long-lasting flooring alternative that could cope with the snow and mud brought in by the Swedish winter. The choice fell on the Bolon collection Graphic in the Etch execution. The result is a dark flooring with subtle lighter-colored lines that generates a dramatic effect in the artificial light of the photography exhibitions. The flooring creates a calm, unifying, and contemporary base throughout the building without stealing the attention from the photographic artworks. But for us, the art is in the flooring performance.

In 2016, the National Bank of Canada unveiled its new trading floor in Sun Life building, a 24-storey tower in central Montreal. The Canadian architecture firm, Architecture 49, was assigned this historic heritage space which hadn't been renovated since 20 years back. Keeping its classic, rich details, including a ceiling lavishly decorated with gold lead and large skylight, the dark space was turned into a luminous, modernised office housing 256 traders and managers. The natural toned flooring from the Flow collection stands in perfect contrast to the room's historic details, adding a little drama to largest active trading floor in Quebec.

Located in what was once Oslo's busiest airfield, the tech hub of Fornebu hosts some of Norway's fastest growing tech companies. Among them, you will find the office of Keystone Academic Solutions, a Norwegian company specialised in higher education marketing and software development. As a company on Forbes top 400 fastest growing companies worldwide, the Oslo based architects at Brandt AS focused their attention to the placement of different teams, making sure that there would be lots of space for future employees while creating an interior concept that resonates with the younger generation. With both rolls and tiles flooring from Bolon's Botanic collection, a large lounge area with shuffle board, table tennis, pool table and a large world map in walnut and textile – Brandt AS succeeded in creating a modern office at the forefront of social interaction.

"With a truly great management and a dynamic international workforce, Keystone keeps on challenging us to perform on their level. So, we must stay sharp and focused. It was fun and hard work. Just the way we like it" says Marius Brandt, interior architect at the Oslo-based Brandt AS office.

When the renovation of Musée des Arts Décoratifs in Paris took shape, 200 square meters of Bolon By Jean Nouvel no.3 was brought into the design to create a solid jet graphical foundation for the gallery rooms. In some rooms the entire floor is covered with the French architect’s beautiful creation, in others, the floor sends a subtle sense of direction on where to go next. The black-based flooring stands as a beautiful contrast to aluminum covered walls and ceilings, as well as to the art on display. So if you’re ever in Paris don’t miss this special place.

# CHANGSHA MEIXIHU

A magnificent and grandiose cultural complex has been shaped in the Chinese city of Changsa. By the Meixi Lake the organic and smooth exterior resemble something otherworldly and almost divine. The white covered flow-shaped constructions comprise a grand 1.800 seat theater, contemporary art museum, multi-purpose venues, and restaurants. The complex forms the Changsa Meixi Lake International Culture and Arts Centre and is designed by the world-renowned architect firm: Zaha Hadid Architects. The ambition is that the Cultural and Arts Centre will become a global cultural destination that appeals to both domesticand international visitors and artists.

The construction of the 150 000 square meters complex began in 2013 and has involved collaborators, consultants, and experts from all over the world. The interior design team desired floorings that would do justice for the buildings' extraordinary architecture, and at the same time be suitable for its heavy and strenuous foot-traffic. When designing the backstage aisles and the theatre offices, the team choose Bolon and picked the products: Sisal Plain in Black and Sisal Plain Granite, both in roll execution.

An old factory in Rotterdam has been revived with a new interior concept and office layout for the company Tapwacht. The architect Maasdam has created a vibrant atmosphere where the Bolon Botanic collection provides a dynamic base. The 500 square meters of flooring consists of triangle Studio tiles in multiple colors that contrasts the industrial raw concrete and visible steelworks of the ceiling. By using Studio tiles, the architect was able to create various visual spatialities within the office space. And the reason for choosing triangles was to emphasize the building's architectural triangle shape. The result of the interior project is a relaxed and inspiring atmosphere that conveys the nature of the Tapwacht business.

Norwegian clothing retail giant Varner, chose Bolon flooring to be installed at their newest headquarters in Asker, Norway. After redesigning the space with local architecture practice Link Arkitekter + Lpo Arkitekter, the company then approached Bolon. “We needed something very quiet, sound absorbent and durable, but also something that looks very cool,” states Joakim Varner, co-owner of Varner. 8 100 square meters of Bolon Ethnic in Kaise fit the brief, and responded well to the clean and uncomplicated office space.

# JAVRI LODGE

Located in Saariselkä, 260 km north of the Arctic Circle in Finnish Lapland, Javri Lodge claims to be the northernmost hotel in the world. It's a wooden chalet style boutique hotel which attracts visitors who are seeking an escape from a hectic life, often craving an opportunity to experience an intimate connection with nature – while simultaneously staying in a hotel which reflects their ecological and sustainable values.

Apart from sustainable values, a nature-inspired look, and a close connection to nature, the Mehtajarvi owners strongly encourage guests to communicate with each other instead of talking to others via their digital technologies. Cellphones are banned in common areas and only allowed in the hotel rooms, where the owners deliberately chose to not place a TV.

Since the Mehtajarvi couple took over the place in 2016, they had a strong vision of taking sustainable design to new levels. Katja and Juha explain:

“Since we took over the hotel three years ago, it has become clear that respect for nature, guests’ appreciation of purity and other general ecological and ethical values are the most important aspects of our hotel philosophy. So those were the most important values when we started to develop the building”, say the Mehtajarvi couple. Katja continues: “Part of our sustainability efforts was to choose sustainable materials of the old log house. Our starting point was that we had this 50-year-old house that got about double the size with a modern building part. And that’s when Bolon came in to the picture”

Their choice fell on Bolon’s flooring due to the sustainability aspects of the flooring, especially its durability and the fact that Bolon’s products consist of recycled material.

Theresia Svanholm at Coco Form created an environment for bank Sparbanken Rekarne, full with lush colors and tasteful flooring from Bolon. Public areas are designed with distinct coloring, and the offices are professionally calm and warm. This design required personalized flooring so the architect used Bolon By You Grid Beige Dusty Pink and Bolon By You Stripe Brown Dusty Pink.

# CHIREC DELTA HOSPITAL

Located on the Boulevard du Triomphe in the Auderghem Delta Zone in Brussels, a new 545-bed state of the art hospital is completed. The building offers patients an emergency department, cancer treatment center, maternity unit, and 28 operational theatres. The maternity unit alone stands ready to provide more than 3.000 birth each year.

The unique layout of the hospital is designed with the patients care in focus. The spaces have been constructed based on the requirements from the various pathologies to minimize the need for patient movements. The construction foundation is formed as a cylindrical shape from which the higher section rises. The volume of the projecting wings is designed to make the most use of the natural light as possible. In the hospital's center, a cylindrical shape forms an atrium where the waiting lounges and the main staircase are located. For these areas, the interior design team of Belgian architect studio Assar, selected the different kinds of flooring from the Botanic and Graphic collection. The results are welcoming areas for visitors, patients, and employees that also take advantage of the positive health aspect of Bolon's flooring.

BOLON  
STUDIO™  
Triangle

Visitors are led through an Art Deco inspired showroom into the Moelven Modus office, guided by angles on the walls and pattern-matched Bolon flooring in large triangles from the Create and Botanic collections. Architect Christina Aponno has designed an office/showroom with a modern character, soft shapes and smoked oak frames, along with velvet and brass materials which help to create new norms and standards for the visual style of offices. The design objective of the Moelven Modus Malmö office was to contribute to new ways of working, behaviours, and patterns based on sustainability and flexibility. This was achieved by creating a stylish office showroom which blurs the line between home and work to promote well-being in both an elegant and functional workplace.

The office was named Sweden's most stylish office in 2019.

# UMESTAN

On an area formerly used by Västerbottens regiment, a contemporary red glass building stands out from the surrounding old military brick houses. The remarkable glass construction, designed by the renowned Swedish architect firm of Wingårdhs, function as office space and was the first building in the city of Umeå to receive the highest assessment level by the environmental certificate: Miljöbyggnad Guld.

In the center of the building, a bright atrium forms a social gathering area. Here, 450 square meters of the Bolon By You collection was chosen to create a beautiful base for the interior expression. The architect's vision of working with smoked glass and black and white elements to create a spectacular brightness through the interior is enhanced by the subtle reflective woven structure of Bolon flooring.

Dutch design agency, Studio Vevs, redesigned Dti Group's traditional office in Amsterdam, transforming it into a modern workplace that mirrors Dti Group's values and spirit.

Going one step further than a renovation, VEVS suggested a demolition of a full section of the building along with a new flooring and design concept that is meant to reflect the Dutch agricultural landscape. Installed on an area of 600 square meters, Bolon flooring from several collections complements round and organic furniture shapes that create the perfect balance between minimalism and warmth.

iDA workplace and strategy has designed the new offices of entrepreneurial coworking space, 101 Cloud Co-Share Office on 101 Taipei in Taipei, Taiwan. Fully utilizing the workplace as a tool to attract and cultivate younger entrepreneurs, iDA designed from the belief that an innovative environment makes an excellent business and a meeting place for young entrepreneurs that hopefully will motivate and drive more people to the Taiwanese entrepreneurial market. In order to create an such an environment, iDA used Bolon flooring from the Artisan and Botanic collections.
